About multi-well testing pilot job results.

In 2017 a pilot job on interpretation of historic BHP and rates with multi-well retrospective testing (MRT) was performed at one of Olhovskoe field blocks by «Sofoil» LLC.

Decomposition of bottomhole pressure helped to carry out the comparative analysis of injectors performance. Reconstructed reservoir pressure curve shows good match with single draw-downs. Findings about well interference, cross-well connectivity and reservoir pressure dynamics are useful with development analysis and activities planning.

PC «Orenburgneft» well-testing department approves the job and recommends the MRT technology for sorting out development issues.

Head of PC «Orenburgneft» well-testing department

Belyakov A.A.
